CASE STUDY

Lack of user visibility weakens firewall and antivirus systems’ ability to block malware

Challenges

- Employees frequently called IT with complaints about poor computer performance
- Increasingly threatening levels of malware bypassing firewall and antivirus systems
- Lack of visibility into users’ machines to see spread of infections

Reasons for Choosing Malwarebytes

- Small system footprint: Malwarebytes works almost invisibly, so users are not disrupted by the security protection
- Improved visibility: Malwarebytes provides visibility into users’ machines, so IT can gauge the spread of infections.
- Support for Macs: Malwarebytes can be deployed on both Macs and PCs, increasing the amount of AvMed users that can use this system.

How Malwarebytes Solved the Problem

- Visibility into the extent and types of threats targeting users’ machines
- Dramatically reduces IT time spent cleaning and re-imaging machines
- Data is continuously updated, providing AvMed with ongoing, proactive protection
- Significant reduction malware activity on users’ machines thanks to the blocking of PUPs, toolbars, and exploits.
Malwarebytes is proactive protection. We see it block malware and ransomware every day. It works perfectly for us.
