CASE STUDY

"...more features for the same price. Cloud was a no-brainer."

Cloud delivers 66% reduction in admin time
Zero trouble tickets - down from 3-5/day
Same cost for cloud, powerful new features

Challenges

Pat started out with Malwarebytes on-premise when he observed that Sophos wasn’t doing enough to stop Ransomware and other malware. Five years on, he’s very pleased with its performance and has recently upgraded to a cloud deployment. With some 2,500 endpoints to protect — including Chromebooks, Macs, and Windows desktops and servers — security remains a challenge. However, cloud migration has made it a challenge that is much more easily managed.

• Minimizing the need for machine reimaging.
• Protecting systems against new and emerging malware types.
• Keeping the faculty and student networks segmented and safe.

Reasons for Choosing Malwarebytes

Dissatisfaction with Sophos initially led Pat to Malwarebytes. Migrating to the cloud was an easy decision to make. Pat noted that the cloud offered more robust features and greater flexibility than on-premise, all for the same price — so getting sign-off on the upgrade was easy.

• Comprehensive: All-in-one solution — no need for a separate management or deployment tools or on-premises hardware.
• Effective: Greatly reduces malware incidents and machine reimaging.
• Affordable: Getting more for your money is an always-welcomed benefit.

OVERVIEW

CUSTOMER
Reavis High School
On-site Administrative Office, Burbank, Illinois
250 faculty
2,000 students

INDUSTRY
Public Education

IT ENVIRONMENT
Traditional layered anti-virus

SOLUTION
Malwarebytes Endpoint Detection and Response
The cloud version has lots of great updates that make management and troubleshooting much easier. Everything is now accessible and it’s easy to see what’s happening — or not — on every endpoint. For the same cost as before, upgrading was a no-brainer.

Pat Kustok, Computer Technician
Reavis High School

How Malwarebytes Solved the Problem

Migrating to cloud had a short learning curve. Everything was up and running — and running up to expectations — within a week. Since implementation, it’s been nearly flawless. “I’d give it 9 stars out of 10,” says Pat.

- **Cloud console** makes adding endpoints and monitoring devices easy. Student and faculty networks previously hosted on separate servers are now in one location where they can be managed remotely — on campus or off.
- **Cloud is a great time-saver.** Zero trouble tickets vs. up to 5 daily before cloud.
- **Zero touch.** User friendly, easy to use. “Prior to cloud, we’d log in to the system daily to keep an eye on things. Now, not so much.”

Malwarebytes is a cybersecurity company that millions worldwide trust. Malwarebytes proactively protects people and businesses against malicious threats, including ransomware, that traditional antivirus solutions miss. The company’s flagship product uses signature-less technologies to detect and stop a cyberattack before damage occurs. Learn more at www.malwarebytes.com.
