

Fayolle preempts cyberattacks and persistent threats

Malwarebytes finds and removes previously hidden threats

Business profile

Fayolle is a French engineering and construction company headquartered in Soisy-Sous-Montmorency. It serves customers across Paris, providing quality construction with a focus on sustainable development. Fayolle preempted malware and ransomware attacks by deploying Malwarebytes.

Business challenge

Clear vision in a cloud environment

Supporting Fayolle's construction activities are the company's own logistics and equipment fleet and building materials production plants. More than 800 employees in France work at 10 production facilities and dozens of remote jobsites. To simplify IT service delivery and gain flexibility, Fayolle moved to a completely cloud-based environment. However, protecting the company's IT and data assets against cyberthreats became more challenging as cyberattacks increased.

Fayolle had deployed a Kaspersky product for its endpoints and recently invested in a next-generation firewall solution. After deploying the new firewall, the IT team saw that the company was under relentless cyberattacks. Phishing and malware attacks resulted in several endpoints becoming infected.

"We decided to remediate an infected machine using the Malwarebytes tool," said Nicolas Molis, IT Manager for Fayolle. "It uncovered threats that our Kaspersky solution missed. I decided that we needed to add another layer of protection before we experienced an incident that disrupted operations."

The solution

Malwarebytes Endpoint Protection

Confident in Malwarebytes' ability to remediate systems, Fayolle chose Malwarebytes Endpoint Protection for cloud-based multi-vector protection against all threats—

OVERVIEW

INDUSTRY

Construction

BUSINESS CHALLENGE

Proactively prevent business disruption as a result of cyberattacks

IT ENVIRONMENT

Kaspersky antivirus, layered enterprise security

SOLUTION

Malwarebytes Endpoint Protection

RESULTS

Detected and eliminated thousands of threats that other solutions missed

Delivered visibility into entire installed base of endpoints, regardless of location

Saved time and accelerated response via the cloud console

Prevented PUPs and exploits from gaining entry

MALWAREBYTES PROVIDES THE PROACTIVE PROTECTION WE WANTED. IT MAKES EFFECTIVE ENDPOINT SECURITY SO MUCH EASIER. WE'RE VERY SATISFIED AND RECOMMEND MALWAREBYTES TO ALL COMPANIES.

NICOLAS MOLIS, IT MANAGER, FAYOLLE GROUP

from traditional viruses to emerging threats. Mr. Molis and his team deployed Malwarebytes through the cloud to the company's endpoints.

"Right away we found thousands of threats on our endpoints," he said. "Malwarebytes' single-agent architecture was easy to deploy. From the cloud console, we could see all of our systems, regardless of where they were located, which we could not do with other solutions."

Fayolle gained cloud-based static and dynamic threat detection, as well as integrated remediation capabilities enabling immediate response. The company didn't have to dedicate servers, virtual machines, or a security expert to the solution.

Instant visibility

"Malwarebytes is just so easy," said Mr. Molis. "The dashboard is fantastic. I can see all of our systems, whether they are at a plant or mobile. Updates, quarantines, and system status are instantly visible, which saves time. In less than a minute, I can see everything."

Fayolle regularly scans endpoints to keep systems clean. Malwarebytes has detected—and eliminated—hundreds of threats that evaded the Kaspersky solution. Prior to deploying Malwarebytes, Mr. Molis was especially concerned about Potentially Unwanted Programs (PUPs), which can open "back doors" into company assets for dangerous persistent threats. Now he doesn't worry. Malwarebytes blocks attempts to compromise application vulnerabilities and remotely execute code on endpoints. It also thoroughly removes any artifacts associated with the primary threat payload.

So easy

Mr. Molis appreciates that Malwarebytes requires very few resources on an endpoint and that it is transparent to users. Anyone on his team can use the cloud console and respond to a quarantined threat—they don't have to be security or IT experts.

"Malwarebytes provides the proactive protection we wanted," said Mr. Molis. "It makes effective endpoint security so much easier. We're very satisfied and recommend Malwarebytes to all companies."

Malwarebytes proactively protects people and businesses against dangerous threats such as malware, ransomware and exploits that escape detection by traditional antivirus solutions. Malwarebytes completely replaces antivirus with artificial intelligence-powered technology that stops cyberattacks before they can compromise home computers and business endpoints.
