CASE STUDY

Malwarebytes finds threats that Symantec and McAfee miss.

Challenges

- IT teams had little control over endpoint protection
- Responses to malware infections were often delayed due to lack of control
- Offices often suffered ransomware infection because the Symantec antivirus often missed malware

Reasons for Choosing Malwarebytes

- Thorough scans: Malwarebytes finds hidden threats that Symantec and McAfee AVs often miss
- Real-time defense policies: Malwarebytes covers company PCs, laptops, and virtualized servers all with multi-vector protection
- Cloud-based system: IT teams can manage all endpoints from the cloud console
- Multi-dimensional interaction: Malwarebytes has a number of free tools that are great for dealing with unusual circumstances
- Reliability: Malwarebytes gives IT team confidence because they just know that it works

How Malwarebytes Solved the Problem

- Eliminated time spend cleaning systems
- Stopped ransomware, malicious redirects, and malware
- Enabled instant access to endpoints from anywhere
We haven’t had ransomware or malware infections since deploying Malwarebytes. I can’t remember the last time I cleaned a machine.
