Employee base vulnerable to malware attacks due to difficult AV management.

**Challenges**

- Highly mobile workforce relies heavily on laptops
- Difficulty managing endpoint security across two platforms and thousands of users
- No way to ensure that individuals were updating their AV
- Numerous malware infections and ransomware attacks got on servers

**Reasons for Choosing Malwarebytes**

- Versatility: Malwarebytes supports both Windows and Mac OS platforms, so all users are covered under one system.
- Sweeping protection: The product serves as a complete solution from viruses, malware, and ransomware.
- Easy deployment: Users were able to install Malwarebytes on their devices themselves.
- Integrated remediation: The product not only detects malware, but immediately and thoroughly removes it, saving time for IT staff.

**How Malwarebytes Solved the Problem**

- Delivers consistent, strong endpoint protection across Windows, Mac OS, and server endpoints
- Stops multiple ransomware attacks and blocks malicious websites
- Simplifies endpoint security management with global visibility and automation
- Provides confidence that users are protected wherever they are
Malwarebytes has stopped multiple ransomware attacks. It also has blocked huge numbers of malicious websites and malware. It delivers on its promise.
