Malwarebytes Endpoint Protection & Response
Integrated protection, detection, and response. Built for ease and speed.

In a post-perimeter world, organizations must rely on endpoint detection and response (EDR) to provide the first line of defense against a cyberattack. Yet, existing solutions require advanced expertise and time to use effectively.

Malwarebytes removes these barriers with a modern EDR that is built for speed for organizations of all sizes that value simplicity and efficiency.

In addition to preventing attacks, Malwarebytes Endpoint Protection & Response makes it easy to quickly investigate, isolate, remediate, and recover from threats—all in a matter of minutes. The solution’s “one-and-done” remediation thoroughly and permanently removes infections in a single operation.

Deploy fast. Manage simply.
Easy to deploy, manage, and tune endpoint security built for speed

Extend your threat protection.
Integrated detection across the attack chain returns a verdict with precision

Investigate, isolate, and recover.
Actionable investigation results delivered to drive threat response decisions

Experience the Advantages

Deploy fast. Manage simply.
Malwarebytes was built for speed—from deployment to management to ongoing maintenance. Organizations with scarce security resources achieve active response and a strong security posture in minutes.

Cloud-native where it matters
Malwarebytes delivers endpoint detection and response with a cloud platform that evolves at the speed of attack innovation, and our performance-focused agent leverages the power of the cloud to efficiently detect more advanced threats.

Management built for endpoints
Our solution lets you effectively manage security on endpoints at enterprise scale, and with just three clicks, gain broad visibility from the global dashboard down to individual indicators of compromise (IoCs) discovered on a machine.

Global threat intelligence
Threat intelligence provides global insights into behavioral heuristics, IoCs, and attack techniques, allowing for constant adaptation of detection and remediation capabilities to address new threats.
Extend your threat protection.
Malwarebytes integrates protection with detection, securing endpoints and providing full visibility and control across the attack chain.

Integrated endpoint protection
Our solution integrates automated, adaptive detection techniques that learn along each stage of the threat detection funnel, providing continual situational awareness of suspicious activity until a final verdict can be made with precision.

Suspicious activity monitoring
Malwarebytes monitors endpoints, creating a “haystack” in the cloud where a combination of behavioral analysis and machine learning pinpoints any IoC “needles.”

Cloud sandbox
We apply powerful threat intelligence to the cloud sandbox’s deep analysis of unknown threats to increase the precision of threat detection, providing you with prepackaged analysis of actionable IOCs.

Investigate, isolate, and recover.
Malwarebytes Endpoint Protection & Response gives security professionals the ability to quickly investigate, isolate, thoroughly remediate, and recover from threats in a matter of minutes.

Guided investigation
Our automated threat hunting provides severity-prioritized IoCs, so you can quickly assess the extent and urgency of a threat. Integrated incident response enables you to isolate and remediate all traces of a threat or globally exclude activity that you deem is benign—all with one click.

Granular attack isolation
Our granular isolation capabilities prevent lateral movement of an attack by allowing you to segment individual machines, subnets, or groups, and continue your active response activities with breathing room.

Thorough remediation
Endpoint remediations are thorough and complete with our Linking Engine technology that maps system changes associated with the malware to remove all traces of the infection and return your endpoints to a truly healthy state.

Ransomware rollback
Malwarebytes stores changes to files on the system in a local cache over a 72-hour period. With one click, you can reverse the damage caused by ransomware and restore the device to a healthy, productive state.
