Malwarebytes Endpoint Detection and Response

Integrated protection, detection, and response. Built for ease and speed.

In a post-perimeter world, organizations must rely on endpoint detection and response (EDR) to provide the first line of defense against a cyberattack. Yet, existing solutions require advanced expertise and time to use effectively.

Malwarebytes removes these barriers with a modern EDR that is built for speed for organizations of all sizes that value simplicity and efficiency.

In addition to preventing attacks, Malwarebytes Endpoint Detection and Response makes it easy to quickly investigate, isolate, remediate, and recover from threats—all in a matter of minutes. The solution’s “one-and-done” remediation thoroughly and permanently removes infections in a single operation.

**Deploy fast. Manage simply.**

Easy to deploy, manage, and tune endpoint security built for speed

**Extend your threat protection.**

Integrated detection across the attack chain returns a verdict with precision

**Investigate, isolate, and recover.**

Actionable investigation results delivered to drive threat response decisions

**Experience the Advantages**

**Deploy fast. Manage simply.**

Malwarebytes was built for speed—from deployment to management to ongoing maintenance. Organizations with scarce security resources achieve active response and a strong security posture in minutes.

**Cloud-native where it matters**

Leveraging the power of the Malwarebytes Nebula cloud platform, endpoint detection and response capabilities evolve at the speed of attack innovation. And, our low footprint agent taps the power of the cloud to efficiently detect advanced threats based on behavior.

**Management built for endpoints**

Our solution lets you effectively manage security on endpoints at enterprise scale, and with just a few clicks, gain broad visibility from the global dashboard down to individual indicators of compromise (IoCs) discovered on a machine.

**Global threat intelligence**

Threat intelligence provides global insights into behavioral heuristics, IoCs, and attack techniques, allowing for constant adaptation of detection and remediation capabilities to address new threats.
Extend your threat protection.
Malwarebytes integrates protection with
detection, securing endpoints and providing full
visibility and control across the attack chain.

Integrated endpoint protection
Our solution integrates automated, adaptive
detection techniques that learn along each stage
of the threat detection funnel, providing continual
situational awareness of suspicious activity until a
final verdict can be made with precision.

Suspicious activity monitoring
Malwarebytes monitors endpoints, creating a
“haystack” in the cloud where a combination
of behavioral analysis and machine learning
pinpoints any IoC “needles.”

Cloud sandbox
We apply powerful threat intelligence to the cloud
sandbox’s deep analysis of unknown threats
to increase the precision of threat detection,
providing you with prepackaged analysis of
actionable IOCs.

Investigate, isolate, and recover.
Malwarebytes Endpoint Detection and Response
gives security professionals the ability to quickly
investigate, isolate, thoroughly remediate, and
recover from threats in a matter of minutes.

Guided investigation
Our automated threat hunting provides severity-
prioritized IoCs, so you can quickly assess the
extent and urgency of a threat. Integrated incident
response enables you to isolate and remediate all
traces of a threat or globally exclude activity that
you deem is benign—all with clicks not scripts.

Granular attack isolation
Our granular isolation capabilities prevent lateral
movement of an attack by allowing you to
segment individual machines, subnets, or groups,
and continue your active response activities with
breathing room.

Thorough remediation
Endpoint remediations are thorough and
complete with our Linking Engine technology
that maps system changes associated with the
malware to remove all traces of the infection and
return your endpoints to a truly healthy state.

Ransomware rollback
Malwarebytes stores changes to files on the
system in a local cache over a 72-hour period.
With one click, you can reverse the damage
caused by ransomware and restore the device to
a healthy, productive state.
